

LEAF PROTECTION

LEAFPROOF® ADVANCED GUTTER PROTECTION SYSTEM

Our Advanced Gutter Guards not only prevent water from shooting off the front of the gutter, but also guide excess water down the roof line, onto the drip edge located underneath the shingles, and down the front of the gutter. Gutter Guards work flawlessly to prevent water from gushing over the lip of the gutter by taking advantage of surface tension, which is simply the property of water that causes it to cling to the surface that it is flowing over. To help better understand surface tension, one should imagine a glass of water being slightly tipped so that beads of water cling to the glass as they drip down; that's surface tension at work!

LEAF EXTERMINATED PREMIUM GUTTER PROTECTION

**As seen in above picture*

Our Premium Gutter Guards utilize a unique Micro-Pore filtration system, which is designed to prevent leaves, seeds, and other debris from entering your gutters but still allow rainwater to pass through. In addition to the Micro-Pore filtration system, our Premium Gutter Guards have specially designed ribs that slow down water flow and encourage airflow making this leaf protection system able to handle ANY amount of rain and remove debris better than flat gutter guards. We only stock this Gutter Guard in black, because it radiates heat and melts ice and snow more quickly.

**Both Gutter Guard Systems discourage wildlife from nesting in gutters*

Eliminate the need to clean your gutters again with our Leafproof Advanced Gutter Protection System
